QUESTION

1. Will the density of the data displayed on the modified scatterplots and dotplots overwhelm viewers?
2. Is the relationship between total arrivals and inflation significant?
3. Is the focus on immigrations too much over the focus on inflation?

IMMIGRATIONS INTO MALAYSIA

Arrival Trends

Inflation Trends

Percentage of Arrivals by State

Total Arrivals by Gender

Text explaining
gender gap in
immigrants

Text summarising
entire visualisation

FOCUS

The flow of the viewer's focus would be:

① First we analyse the trend of immigrant arrivals

③ Then, we visualise the arrivals in each state on a choropleth map

④ Finally, we observe any gender gaps immigrant arrivals...

② Then, we see how immigrant arrivals affected inflation.

⑤ which is explained further here.

TITLE: Immigrants into Malaysia

AUTHOR: Elisabeth Chan

DATE: 1/10/2024

SHEET: 2

TASK: 505

OPERATIONS

TOOLTIPS:

- ① Hovering over any point in the line charts shows us the state name, total arrivals or inflation rates, and the date.
- ② Hovering over a dot on the connected dot plot shows the state, total female arrivals, and total male arrivals.

FILTER:

- ① Clicking on any of the lines or states in the legend displays that line on the graph with the rest of the lines faded.

DISCUSSION

ADVANTAGES:

- ① The visualisation is informative with text annotations
- ② The inflation rates can be observed in relation to the arrival trends.

DISADVANTAGES:

- ① The bottom might be unbalanced if the connected dot plot is skewed.

OPERATIONS

TOOLTIPS:

① Hovering over each point of the line graph shows:

Arrivals:	Inflation rates:
1. state	1. state
2. Total arrivals	2. Inflation rate
3. Date	3. Date

② Hovering over a state in the map shows:

1. state
2. Total arrivals
3. Percentage of immigrants among total population.

FILTER:

① Hovering over one state in the map highlights the state by increasing its opacity.

DISCUSSIONS

ADVANTAGES:

- ① Layout is balanced since there is only one idiom per row.
- ② Map is at the visual centre and is the main focus of the visualisation.

DISADVANTAGES:

- ① The flow of the map may be hard to follow since the arrival trend and inflation trend are related.

IMMIGRATIONS INTO MALAYSIA

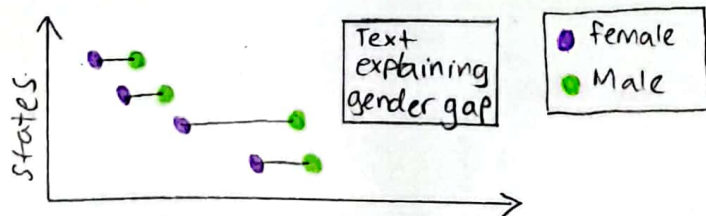

Arrivals into Malaysia Trend by State

Percentage of Arrivals by State

Total Arrivals by Gender

Inflation Rates Trend

FOCUS

The flow of the viewer's focus would be:

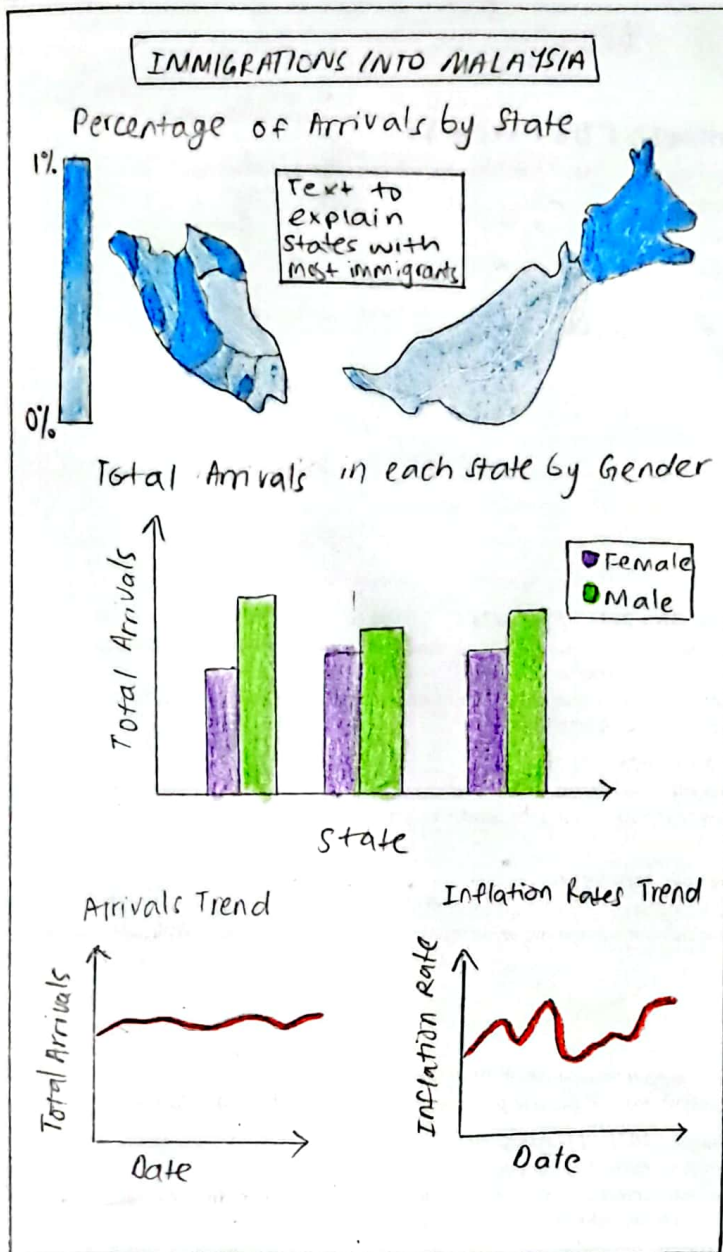

① The trend of arrivals into Malaysia by state

③ Then, we analyse the gender distribution of immigrants

② Then, we compare the number of immigrants in each state

④ Finally, we analyse the inflation rates by state

SHEET: 4

TASK: SOS

OPERATIONS**TOOLTIPS:**

- ① Hovering over a state in the map shows us the state name, total arrivals, and percentage of arrivals

State: ~
Total: ~
Percent: ~

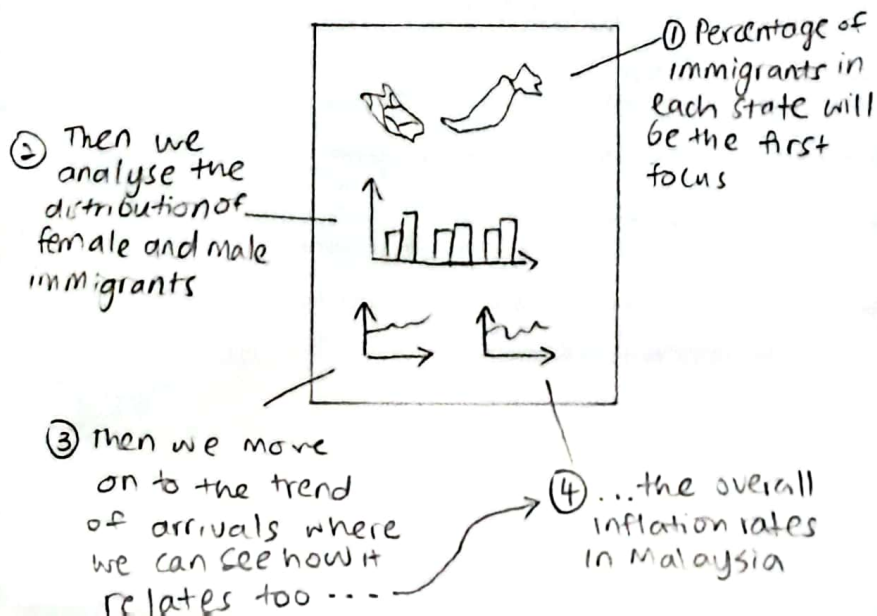

- ② Hovering over a point in the line charts shows us the total arrivals or inflation rate, and date.

FILTERS:

- ① Only the top two highest total arrivals will be highlighted in the bar chart. The rest of the bars will be faded out.

FOCUS The flow of the viewer's focus would be:

**DISCUSSIONS****ADVANTAGES:**

- ① This layout is well balanced
- ② The flow is easy to follow
- ③ The operations are easy to navigate and understand.

DISADVANTAGES:

- ① The line charts might be too empty
- ② Bar charts and line charts are too simple

SHEET: 5

TASK: SOS

OPERATIONS

TOOLTIPS:

① Hovering over any of the
states on the map shows:

1. State
2. Percentage of arrivals
compared to total
population

② Hovering over any point on
the line charts show:

Arrivals linechart Inflation linechart

- | | |
|-------------------|-------------------|
| 1. State | 1. State |
| 2. Total arrivals | 2. Inflation rate |
| 3. Date | 3. Date |

FILTERS:

① Clicking on a state in the
legend for the line charts
will filter only that state's
line on the chart.

DETAIL

1. Techniques:

The visualisation will be
created using:

- a. Vega-Lite
- b. HTML
- c. CSS

2. Dependencies:

- RStudio for transforming
the raw data.
- VS Code to operate HTML
and CSS.
- Vega-Lite online editor to
create the visualisations

3. Estimated time: (Total 12 hours)

- 2 hours to transform the data
- 10 hours for the visualisation
- 4 hours for the layout

4. Hardware requirements:

- 1GB RAM for VS Code
- 4GB RAM for RStudio
